

FOALING OUT MARES

We accept all major credit cards

Assisted Foal-Out (\$300) We will call you as soon as possible upon the birth of your foal.

Plasma (\$250)

We believe the administration of plasma post-foaling will give your foal a much healthier start in life, and provide a greater level of immunity to ward off most neonatal infections. The plasma used at 6666 Ranch has been prepared to provide antibodies for the most common illnesses your foal may encounter. For best results, a booster should be administered 3 weeks following initial dose. (Additional \$250 for second liter of plasma.)

Recommended Pre-Foaling Program – Mare

The following procedures will be performed if mare has not had them:

- RHINOPNEUMONITIS (RHINO) vaccination: 3rd, 5th, 7th & 9th month gestation
- INFLUENZA (FLU): 7th month gestation
- ROTAVIRUS: 8th, 9th & 10th month gestation
- DEWORM: Frequency, product determined by your veterinarian; rotated every 90 days.
- PRE-FOALING VACCINATIONS: given 2-4 weeks prior to foaling, as follows
 - ENDOVAC (Salmonella)
 - INFLUENZA (Flu)
 - RHINOPNEUMONITIS (Rhino)
 - EEE/WEE (Eastern & Western Equine Encephalomyelitis)
 - TETANUS
 - STREP AUTOGENOUS
 - WEST NILE VIRUS

Post-Foaling Procedures – Mare

Procedures will be performed post-foaling:

- CASLICKS SUTURES (if deemed necessary)
- FLOATING TEETH
- DEWORM VIA STOMACH TUBE
- RABIES VACCINATION

Post-Foaling Procedures – Foal
